APPROVED - COMPLIANT

FINAL APPROVED PHARMACEUTICAL CLAIM

In a Phase I/II study (NCT04041310) of adults with unresectable or metastatic dMMR or MSI-H colorectal, gastric, or gastro-esophageal junction tumors, Pembrolizumab was evaluated for safety and tolerability in Phase I, Cohort A, with dose-limiting toxicity (DLT) as the primary endpoint. The reported p-value was 0.05, which does not meet the conventional threshold for statistical significance ($p < 0.05$); therefore, no statistically significant conclusion can be drawn from this endpoint.

SOURCE CLINICAL DATA (PROVENANCE)

The following data was retrieved directly from ClinicalTrials.gov and used as the sole factual basis for the claim above.

Drug Name	Pembrolizumab
NCT Identifier	NCT04041310
Study Phase	Phase I/II
Primary Endpoint	Toxicity (DLT assessment), in Phase I, Cohort A
p-value	0.05
Hazard Ratio	Not reported
95% CI	Not reported
Patient Population	Adults with unresectable or metastatic dMMR or MSI-H CRC, gastric, or gastro-esophageal junction tumors

COMPLIANCE VERDICT

Verdict	PASS - Claim approved for use
AI Confidence Score	95%
FDA Rule Framework	FDA Guidance for Industry - Pharmaceutical Promotional Materials
RAG Knowledge Base	5 FDA guideline documents (21 CFR, promotional standards)
Revision Loops	1 loop(s) - First-attempt approval

SYSTEM EXECUTION METADATA

Run ID	305576e7-6c63-4a2d-846e-a73a9ff7e6ec
Generation Time	2026-09-14 11:45:46 UTC
Drug Queried	Pembrolizumab
Output Tone	scientific
AI System	PharmAgentAI v1.0 (LangGraph + Groq)

Compliance Engine

FAISS RAG + Adversarial Regulatory Agent (temp=0.0)

DRUG COMPLIANCE HISTORY (EPISODIC MEMORY)

Historical performance data retrieved from the system database.

Total Runs (this drug)	10
Successful Runs	10
Pass Rate	100%
Avg. Revision Loops	1.4
Memory Status	Active - past failures inform future drafts
