APPROVED - COMPLIANT

FINAL APPROVED PHARMACEUTICAL CLAIM

In a Phase 1 dose-escalation study (NCT04624113) of patients with pembrolizumab- or nivolumab-resistant, recurrent or metastatic head and neck squamous-cell carcinoma (HNSCC), a recommended phase 2 dose of tazemetostat in combination with a fixed dose of pembrolizumab was identified. These preliminary, exploratory findings (p=0.05) do not establish efficacy and are intended solely to inform subsequent phase 2 dose selection.

SOURCE CLINICAL DATA (PROVENANCE)

The following data was retrieved directly from ClinicalTrials.gov and used as the sole factual basis for the claim above.

Drug Name	Pembrolizumab
NCT Identifier	NCT04624113
Study Phase	Phase 1
Primary Endpoint	Recommended phase 2 dose of tazemetostat in combination with a fixed dose of pembrolizumab (Phase I only)
p-value	0.05
Hazard Ratio	Not reported
95% CI	Not reported
Patient Population	Pembrolizumab- or nivolumab-resistant, recurrent or metastatic head and neck squamous-cell carcinoma (HNSCC)

COMPLIANCE VERDICT

Verdict	PASS - Claim approved for use
AI Confidence Score	95%
FDA Rule Framework	FDA Guidance for Industry - Pharmaceutical Promotional Materials
RAG Knowledge Base	5 FDA guideline documents (21 CFR, promotional standards)
Revision Loops	2 loop(s) - 2 drafts before final approval

SYSTEM EXECUTION METADATA

Run ID	98645fe2-19b8-4115-8db1-93eed8cbf9ac
Generation Time	2026-09-17 16:43:32 UTC
Drug Queried	Pembrolizumab
Output Tone	scientific
